AIM: The course aims at providing knowledge for the basic concepts of Probability and Statistics and the techniques for solving mathematical problems for probability analysis which will be useful in solving some Engineering problems.

OBJECTIVES:

- To introduce the basic concepts of one dimensional and two dimensional Random Variables.
- To provide information about Estimation theory, Correlation, Regression and Testing of hypothesis.
- To enable the students to use the concepts of multivariate normal distribution and principle components analysis.

UNIT I ONE DIMENSIONAL RANDOM VARIABLES: 9
Random variables - Probability function – Moments – Moment generating functions and their properties – Binomial, Poisson, Geometric, Uniform, Exponential, Gamma and Normal distributions – Functions of a Random Variable.

UNIT II TWO DIMENSIONAL RANDOM VARIABLES: 9
Joint distributions – Marginal and Conditional distributions – Functions of two dimensional random variables – Regression Curve – Correlation.

UNIT III ESTIMATION THEORY: 9
Unbiased Estimators – Method of Moments – Maximum Likelihood Estimation - Curve fitting by Principle of least squares – Regression Lines.

UNIT IV TESTING OF HYPOTHESES: 9
Sampling distributions - Type I and Type II errors - Tests based on Normal, t , χ^2 and F distributions for testing of mean, variance and proportions – Tests for Independence of attributes and Goodness of fit.

UNIT V MULTIVARIATE ANALYSIS: 9
Covariance matrix – Correlation Matrix – Multivariate Normal density function – Principal components – Sample variation by principal components – Principal components by graphing

TOTAL : 60 PERIODS

BOOKS FOR REFERENCE:

1. Richard Johnson. "Miller & Freund's Probability and Statistics for Engineer Prentice – Hall of India, Private Ltd., New Delhi, 7th Edition, 2007.
2. Richard A. Johnson and Dean W. Wichern, "Applied Multivariate Statistical Analysis", Pearson Education, Asia, 5th Edition, 2002.
3. Gupta, S.C. and Kapoor, V.K."Fundamentals of Mathematical statistical", sultanan Sons, New Delhi, 2001.
4. Jay L. Devore, "Probability and statistics for Engineering and the Sciences", Thomson and Duxbbury, Singapore, 2002.
5. Dallas E Johnson et al., "Applied multivariate methods for data analysis", Thomson and Duxbbury press, Singapore, 1998.

AIM: To impart knowledge at an advanced level in applied materials Engineering.

OBJECTIVE:

This course provides knowledge in the areas Of Industrial Metallurgy, chemical Properties, heat treatment, advanced materials and selection of materials for important applications.

UNIT I PLASTIC BEHAVIOUR & STRENGTHENING 8

Mechanism of Plastic deformation, role of dislocations, yield stress, shear strength of perfect and real crystals –Strengthening mechanism, work, hardening, solid solutioning, grain boundary strengthening, Poly phase mixture, precipitation, particle fibre and dispersion strengthening. Effect of temperature, strain and strain rate on plastic behaviour – Super plasticity.

UNIT II FRACTURE BEHAVIOUR 8

Griffith's theory stress intensity factor and fracture toughness-Toughening mechanisms – Ductile, brittle transition in steel-High temperature fracture, creep – Larson-Miller, Parameter – Deformation and fracture mechanism maps – Fatigue. Low and high cycle fatigue test, crack initiation and propagation mechanisms and Paris law – Effect of surface and metallurgical parameters on fatigue – fracture of non metallic materials – Failure analysis, sources of failure, procedure of failure analysis.

UNIT III SELECTION OF MATERIALS 8

Motivation for selection, cost basis and service requirements – selection for Mechanical properties, strength, toughness, fatigue and creep – Selection for surface durability corrosion and wear resistance – Relationship between materials selection and processing – Case studies in materials selection with Relevance to aero, auto, marine, machinery and nuclear applications.

UNIT IV MATERIAL PROCESSING 9

Processing of engineering materials – Primary and Secondary processes – stability, Weldability, forgeability and malleability Criteria – Process induced defects – Monitoring and control.

UNIT V MODERN MATERIALS AND TREATMENT 12

Dual phase steels, high strength low alloy (HSLA) Steel transformation included plasticity (TRIP), Steel, maraging steel, shape memory alloys, properties applications of engineering plastics and composites materials advanced structural ceramics – WC, Tic, Tac, Al₂O₃, Sic, Si₃N₄, CBN diamond, heat treatment alloy and tool steels, vapour deposition – Plasma, PVD- thick and thin film deposition – Nano materials- production of Nano sized materials.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. George E.Dieter, "Mechanical Metallurgy", McGraw Hill, 1988.
2. Charles, J.A., Crane, F.A.A and Furness, J.A.G., "Selection and use of Engineering Materials", (3 rd Edition, Butterworth – Heiremann, 1977.

CC 9211**COMPETITIVE MANUFACTURING SYSTEMS****LT P C****3 0 0 3**

AIM: To impart knowledge on the pace of changes in the manufacturing technology.

OBJECTIVE:

To emphasize the knowledge on the quality improvement, automation,and advanced manufacturing techniques to create the highest-caliber products quickly, efficiently, inexpensively, and in synchronization with the marketing, sales, and customer service of the company.

UNIT I MANUFACTURING IN A COMPETITIVE ENVIRONMENT: 9

Automation of manufacturing process - Numerical control - Adaptive control - material handling and movement - Industrial robots - Sensor technology - flexible fixtures - Design for assembly, disassembly and service.

UNIT II GROUP TECHNOLOGY & FLEXIBLE MANUFACTURING SYSTEMS: 9

Part families - classification and coding - Production flow analysis - Machine cell design - Benefits. Components of FMS - Application work stations - Computer control and functions - Planning, scheduling and control of FMS - Scheduling - Knowledge based scheduling - Hierarchy of computer control - Supervisory computer.

UNIT III COMPUTER SOFTWARE, SIMULATION AND DATABASE OF FMS: 9

System issues - Types of software - specification and selection - Trends - Application of simulation - software - Manufacturing data systems - data flow - CAD/CAM considerations - Planning FMS database.

UNIT IV LEAN MANUFACTURING: 9

Origin of lean production system – Customer focus – Muda (waste) – Standards – 5S system – Total Productive Maintenance – standardized work –Man power reduction – Overall efficiency - Kaizen – Common layouts - Principles of JIT - Jidoka concept – Poka-Yoke (mistake proofing) - Worker Involvement– Quality circle activity – Kaizen training - Suggestion Programmes – Hoshin Planning System (systematic planning methodology) – Lean culture.

UNIT V JUST IN TIME: 9

Characteristics of JIT - Pull method - quality -small lot sizes - work station loads - close supplier ties – flexible work force - line flow strategy - preventive maintenance - Kanban system - strategic implications - implementation issues - Lean manufacture.

TOTAL: 45 PERIODS

TEXT BOOK:

1. Groover M.P., " Automation, Production Systems and Computer Integrated Manufacturing ", Third Edition, Prentice-Hall, 2007.
2. Pascal Dennis, "Lean Production Simplified: A Plain-Language Guide to the World's Most Powerful Production System", (Second edition), Productivity Press, New York, 2007.

REFERECES:

3. Taiichi Ohno, Toyota, " Production System Beyond Large-Scale production ", Productivity Press (India) Pvt.Ltd. 1992.

**CI 9213 COMPUTER AIDED DESIGN AND MANUFACTURING L T P C
3 0 0 3**

AIM : To impart in depth knowledge in various fields of Computer Aided Design and Manufacture.

OBJECTIVES :

On completion of the course the students are expected to be knowledgeable in 2 dimensional and 3 dimensional transformations, modeling and analysis, CAD/CAM integration, CNC machine tool building, CNC programming using manual method and generation of CNC codes using CAM software.

UNIT I TWO DIMENSIONAL AND THREE DIMENSIONAL TRANSFORMATIONS: 9

2D – Representation and Transformations of points – Transformations of Lines – Rotation, Reflection, Scaling and combined transformations, 3D – Scaling – Shearing – Rotation- Reflection – Translation – Projections parametric representation of Ellipse, parabola, Hyperbola- Practice on sate of the art CAD software.

UNIT II MODELLING AND ANALYSIS: 8

Wire frame, surface and solid modeling – solid modeling packages – Finite Element analysis (FEA) – Introduction and procedures – solution Techniques – Introduction to FEA packages.

UNIT III CAD/CAM INTEGRATION: 09

Networking- networking techniques, LAN, components, wiring methods, network interface cards, network standards, Graphics standards – Data exchange format, evolution- features of various interfaces GKS, IGES, DXF, PDES, STEP etc., Process planning, Computer Aided process planning(CAPP) - variant, generative approaches

UNIT IV COMPUTER NUMERICAL CONTROL MACHINES: 10
CNC Machine Building, structural details – configuration and design, friction and anti friction LM guide ways, Ball screw, torque transmission elements, Spindle drives, Feed drives, Positional measuring transducers- gratings, encoders, inductosyn, laser interferometer, Spindle, ATC, APC, Tooling – qualified, preset tooling.

UNIT IV CNC PROGRAMMING: 10
Structure of CNC program, Coordinate system, G & M codes, cutter radius compensation, tool nose radius compensation, tool wear compensation, canned cycles, sub routines, do loop, mirroring features, Manual part programming for CNC turning and machining centre, Generation of CNC program using popular CAM software.

TOTAL : 45 PERIODS

TEXT BOOKS :

1. Ibrahim Zeid, "Mastering CAD/CAM", Tata McGraw –Hill Ed., 2007
2. HMT, "Mechatronics", Tata McGraw –Hill Ed., 1998
3. P Radhakrishnan, S Subramanyan, "CAD/CAM/CIM", New Age Publishers, 1994.

**CI 9214 ADVANCES IN MANUFACTURING TECHNOLOGY L T P C
3 0 0 3**

AIM:

The aim of this course is to impart knowledge in various fields of advanced manufacturing technology

OBJECTIVE:

At the end of this course the students are expected to understand metal cutting and cutting tool materials, special machining processes, unconventional machining processes, micro machining processes and rapid prototyping.

UNIT I METAL CUTTING AND TOOL MATERIALS 9

Orthogonal and oblique cutting – Types of tool wear, abrasion, diffusion, oxidation. fatigue and adhesive wear – Prediction of tool life – Monitoring of wear, cutting forces and Vibration – Tool Materials - Cemented Carbide, Coated Carbide, Cermets. Ceramic, CBN and PCD – Selection of machining parameters and tools.

UNIT II SPECIAL MACHINING PROCESSES & EXPERIMENTAL TECHNIQUES 9

Deep hole drilling Honing Lapping – Super finishing – Burnishing – Broaching High speed Machining - Measurement of cutting forces, temperature, vibration and tool wear in machining processes.

UNIT III UNCONVENTIONAL MACHINING 9
Principles, processes various influencing parameters and applications of Ultrasonic Machining, Electro Discharge Machining, Electro Chemical Machining, Electron and Laser Beam Machining, Plasma Arc Machining and Water Jet Machining.

UNIT IV MICRO MACHINING 9
Introduction to MEMS, principle, process capabilities, types, advantages, limitations and applications of bulk micro machining, surface micro machining and tool based micro machining processes.

UNIT V RAPID PROTOTYPING 9
Introduction – Classification – Principle advantages limitations and applications- Stereo lithography – Laminated object manufacturing – Selective laser sintering – FDM, SGC, 3D Printing.

TOTAL:45 PERIODS

TEXT BOOKS:

1. Shaw Milton.C., “Metal Cutting Principles”, Second Edition, Oxford University, Press, 2005.
2. Armarego E.J.A. and Brown R.H., “The Machining of metals”, Prentice Hall, 1982.

CI 9215

CIM LAB I

**L T P C
0 0 3 2**

1. Using of Preprocessor and post processor in finite element analysis (Exercise must include importing model from a modeling package, model correction, meshing, and addressing quality of mesh issues).
2. Model analysis of engineering structures (Exercises must include model analysis of simple beams and plates and comparison of FEA and analytical solutions, and model analysis of actual components like brackets, machine tool structures etc).
3. Nonlinear analysis (Exercise must include plastic deformation of simple objects or crash analysis simple structures.
4. 3 Axis CNC code generation for CNC machining.
5. CNC Machining of complex features like machining of hemispherical cavity, tapered hole, hole of parabolic shape etc..

LIST OF EQUIPMENT REQUIRED:

1. Computers 18
2. Preprocessor for FEA (Like Hyper mesh)
3. CAD Workstation
4. FEA Software
5. FEA Software for Nonlinear Analysis I
6. CAM Software for 3 axis machining or more
7. CNC Production type lathe or Milling Machine.

TOTAL : 45 PERIODS

ED 9264 DESIGN OF HYDRAULIC AND PNEUMATIC SYSTEMS L T P C
3 0 0 3

UNIT I OIL HYDRAULIC SYSTEMS AND HYDRAULIC ACTUATORS 5

Hydraulic Power Generators – Selection and specification of pumps, pump characteristics. Linear and Rotary Actuators – selection, specification and characteristics.

UNIT II CONTROL AND REGULATION ELEMENTS 12

Pressure - direction and flow control valves - relief valves, non-return and safety valves - actuation systems.

UNIT III HYDRAULIC CIRCUITS 5

Reciprocation, quick return, sequencing, synchronizing circuits - accumulator circuits - industrial circuits - press circuits - hydraulic milling machine - grinding, planning, copying, - forklift, earth mover circuits- design and selection of components - safety and emergency mandrels.

UNIT IV PNEUMATIC SYSTEMS AND CIRCUITS 16

Pneumatic fundamentals - control elements, position and pressure sensing - logic circuits - switching circuits - fringe conditions modules and these integration - sequential circuits - cascade methods - mapping methods - step counter method - compound circuit design - combination circuit design.

UNIT V INSTALLATION, MAINTENANCE AND SPECIAL CIRCUITS 7

Pneumatic equipments- selection of components - design calculations – application - fault finding - hydro pneumatic circuits - use of microprocessors for sequencing - PLC, Low cost automation - Robotic circuits.

TOTAL : 45 PERIODS

CI 9271 SUPPLY CHAIN MANAGEMENT L T P C
3 0 0 3

AIM: To impart knowledge on logistics, supply chain network design, selection and coordination of supply chain.

OBJECTIVE:

At the end of this course the student should be able to understand

1. Importance of supply chain
2. logistics management
3. design factors of supply chain
4. sourcing and revenue management
5. managing the supply chain.

UNIT I	INTRODUCTION	6
Definition of Logistics and SCM: Evaluation, Scope Importance & Decision phases – Drivers of SC performance and Obstacles.		
UNIT II	LOGISTICS MANAGEMENT	10
Factors – Modes of transportation – Design options for transportation Networks - Routing and Scheduling – Inbound and outbound logistics –Reverse Logistics – 3PL – Integrated Logistics concepts- Integrated Logistics Model – Activities – Measuring logistics cost and performance – Warehouse Management – Case Analysis.		
UNIT III	SUPPLY CHAIN NETWORK DESIGN	10
Distribution in supply chain – Factors in Distribution network design – design Options – Network Design in supply chain – Framework for network Decisions – Managing cycle inventory and safety.		
UNIT IV	SOURCING AND PRICING IN SUPPLY CHAIN	9
Supplier Selection and contracts – design collaboration – Procurement process. Revenue management in supply chain.		
UNIT V	COORDINATION AND TECHNOLOGY IN SUPPLY CHAIN	10
Supply Chain Coordination – Bullwhip effect of lack of Coordination and obstacles – IT and SCM – supply Chain IT frame work. E Business & SCM. Metrics for SC performance – Case Analysis.		
TOTAL : 45 PERIODS		

TEXT BOOK:

1. Supply chain management, Strategy, Planning, and Operation – Sunil Chopra and Peter Meindl – PHI, Second edition, 2004.

REFERENCES:

1. Logistics, David J.Bloomberg, Stephen Lemay and Joe B.Hanna, PHI 2002.
2. Logistics and Supply Chain Management – Strategies for Reducing Cost and Improving Service. Martin Christopher, Pearson Education Asia, Second Edition.
3. Modeling the supply Chain, Jeremy F.Shapiro, Thomson Duxbury, 2002.
4. Handbook of Supply Chain Management, James B.Ayers, St.Lucle Press, 2000.

**CI 9250 ADVANCES IN WELDING AND CASTING TECHNOLOGY L T P C
3 0 0 3**

AIM: To impart knowledge on advances in welding and casting technology, cast design and advanced welding and casting processes.

OBJECTIVE: At the end of this course the student should be able to understand

- Design principles of welding and casting
- Principles of advanced welding and casting processes
- Automation of welding and casting plant.

UNIT I WELDING DESIGN AND METALLURGY 10

Weld joint design-principle of stresses-weld thermal cycles - Heat Affected Zone (HAZ) - Weldability of steels - Cast iron - Stainless steels, aluminum, copper and titanium alloys - Hydrogen embrittlement - Pre and Post weld heat treatments - Weld defects.

UNIT II SPECIAL WELDING PROCESSES 10
Friction welding process - effects of speed and pressure –Types- Explosive welding – Process Parameters-Plasma arc welding - Electron beam welding - High frequency induction welding - Diffusion bonding -Types- Cold pressure welding - Ultrasonic welding - Laser beam welding.

UNIT III CASTING DESIGN AND METALLURGY 8
Design of gate,sprue,riser-design of patterns – design of thin and unequal sections-L,T,V,X,Y junctions-Solidification –Shrinkage – Rapid solidification processing(RSP)- Melt spinning-Roll quenching-Vibratory solidification-Splat cooling.

UNIT IV SPECIAL CASTING PROCESSES 8
Evaporative Pattern Casting Process and full mould process –Vaccum sealed moulding- vaccum casting-Magnetic Moulding -Squeeze Casting-types- Plaster mould casting-Ceramic mould casting-Thixofforming or semi solid forming-Single crystal growing.

UNIT V AUTOMATION OF WELDING AND FOUNDRY 9
Use of robots in welding- weld positioner and manipulators -weld seam tracking-arc sensing-vision system-automation of foundry-use of robots-moulding machines-Automation of sand plant, moulding and fettling sections of foundry-Dust and fume control.

TOTAL : 45 PERIODS

5. American Society of Welding, "Hand book of Welding", Vol.I to V.

**CI 9251 RELIABILITY AND TOTAL PRODUCTIVE MAINTENANCE L T P C
3 0 0 3**

AIM: To impart knowledge about reliability and total productive maintenance

OBJECTIVE: To teach the essentiality of reliability engineering, reliability prediction and the implementation of total productive maintenance.

UNIT I INTRODUCTION 9
Reliability function - MTBF - MTTF - mortality curve - availability -Maintainability.

UNIT II FAILURE DATA ANALYSIS 9
Repair time distributions - exponential, normal, log normal, gamma, and Weibull - reliability data requirements - Graphical evaluation.

UNIT III RELIABILITY PREDICTION 9
 Failure rate estimates - Effect of environment and stress - Series and Parallel systems - RDB analysis – Standby Systems - Complex Systems.

UNIT IV RELIABILITY MANAGEMENT 9
 Reliability demonstration testing - Reliability growth testing - Duane curve -Risk assessment - FMEA, Fault tree.

UNIT V TOTAL PRODUCTIVE MAINTENANCE 9
 Causes of Machine Failures - Downtime - Maintenance policies - Restorability predictions - Replacement models - Spares provisioning -Maintenance management – Total Productive Maintenance – Maximizing equipment effectiveness – Organizing for TPM implementation – Implementation – TPM small group activities.

TOTAL : 45 PERIODS

TEXT BOOK:

1. Modarres, "Reliability and Risk Analysis ", Meral Dekker Inc., 1993.
2. Nakajima, Seiich, "Introduction to TPM", Productivity Press, 1988.

REFERENCES:

CC 9251 COMPUTER AIDED PROCESS PLANNING L T P C
3 0 0 3

UNIT I INTRODUCTION 9
 The Place of Process Planning in the Manufacturing cycle - Process Planning and Production Planning – Process Planning and Concurrent Engineering, CAPP, Group Technology.

UNIT II PART DESIGN REPRESENTATION 9
 Design Drafting - Dimensioning - Conventional tolerance - Geometric tolerance - CAD - input / output devices - topology - Geometric transformation - Perspective transformation - Data structure - Geometric modelling for process planning - GT coding - The optiz system - The MICLASS system.

UNIT III PROCESS ENGINEERING AND PROCESS PLANNING 9
 Experienced, based planning - Decision table and decision trees - Process capability analysis - Process Planning - Variant process planning - Generative approach - Forward and Backward planning, Input format, AI.

UNIT IV COMPUTER AIDED PROCESS PLANNING SYSTEMS 9
 Logical Design of a Process Planning - Implementation considerations - manufacturing system components, production Volume, No. of production families - CAM-I, CAPP, MIPLAN, APPAS, AUTOPLAN and PRO, CPPP.

UNIT V AN INTERGRADED PROCESS PLANNING SYSTEMS 9
Totally integrated process planning systems - An Overview - Modulus structure - Data Structure, operation - Report Generation, Expert process planning.

TOTAL : 45 PERIODS

**CI 9253 CORROSION AND SURFACE ENGINEERING LT P C
3 0 0 3**

AIM: To impart knowledge on the corrosion and surface problems in Engineering practices.

OBJECTIVE:

- To impart knowledge on the scientific principles and methods that underlie the cause, detection, measurement and prevention of corrosion problems in engineering practices.
- To impart knowledge on the hands-on approaches for matching surface treatments with design and performance requirements.

UNIT I MECHANISMS AND TYPES OF CORROSION 9
Principles of Corrosion – classification of corrosion – form of corrosion, general, localized, metallurgical influenced, mechanically assisted, environmentally induced corrosions - Factors influencing corrosion- corrosion damage – corrosion cost.

UNIT II TESTING AND PREVENTION OF CORROSION 9
Planning and preparation of corrosion tests – In-service monitoring, simulated service, laboratory testing – Evaluation of corrosion - Prevention of Corrosion, suitable designing and modifications of corrosive environment, corrosion inhibitors -Cathodic Protection - Anodic protection - Protective surface coatings.

UNIT III CORROSION BEHAVIOR OF MATERIALS 9
Selection of material for various corrosive environments - Corrosion of Steels, Stainless Steel, Aluminum alloys, Copper alloys, Nickel and Titanium alloys – Corrosion of Polymers, Ceramics and Composite materials.

UNIT IV SURFACE COATINGS 9

Solid surface significance ,surface properties, superficial layer – changing surface metallurgy, chemistry and adding a surface layer or coating - Diffusion coatings- Electro and Electro less Plating-Hot dip coating-Hard facing-Metal spraying, Plasma Spraying-Ceramics-APS, VPS, CCAPS – Flames and Arc processes – Conversion coating.

UNIT V THIN LAYER ENGINEERING PROCESSES 9

Laser and Electron Beam hardening- Thermal evaporation, Arc Vaporization, Sputtering, Ion plating- Vapor deposition processes, Implantation technique – Coating of tools, TiC, TiN, Al₂O₃ and Diamond coating – Properties and applications of thin coatings.

**CI 9254 TOOL ENGINEERING LT P C
3 0 0 3**

AIM : To impart in depth knowledge in various fields of tool engineering.

OBJECTIVES: This course provides knowledge in the areas of design of single point and multi point cutting tools, dies, jigs, fixtures and limit gauges and toll design for CNC machines.

UNIT I INTRODUCTION 7

Broad Classification of Tools-Cutting tools, Dies , Holding and Measuring tools, Tool materials and heat treatment- Ferrous, non-ferrous and non metallic materials, tool making practices.

UNIT II DESIGN OF CUTTING TOOLS 11

Single Point Cutting Tools: Classification, Nomenclature, geometry, design of single point tools for lathes, shapers, planers etc. Chip breakers and their design. Multipoint Cutting Tools: Classification and specification, nomenclature, Design of drills, milling cutters, broaches, taps etc. Design of Form Tools: Flat and circular form tools, their design and applications.

UNIT III DESIGN OF DIES 10

Classification of dies, Design of Dies for Bulk metal Deformation-Wire Drawing, Extrusion, Forging and Rolling; Design of Dies for Sheet metal: Blanking and Piercing, Bending and Deep-drawing; Design of Dies used for Casting and Moulding, Powder Metallurgy die design.

UNIT IV DESIGN OF JIGS AND FIXTURES 9
 Classification of Jigs and Fixtures, Fundamental Principles of design of Jigs and Fixtures, Location and Clamping in Jigs and fixtures, Simple design for drilling Jigs, Milling fixtures etc. Indexing Jigs and fixtures.

UNIT V DESIGN OF LIMIT GAUGES AND TOOL DESIGN FOR CNCMACHINES 8
 Fixed gauges, gauge tolerances, indicating gauges, automatic gauges, selection of materials, tool design for CNC machines- fixture design, cutting tools, tool holding, tool pre-setter, automatic tool changers and positioners.

TOTAL : 45 PERIODS

**CI 9255 TOTAL QUALITY SYSTEMS AND ENGINEERING L T P C
 3 0 0 3**

AIM: To impart knowledge on the total quality system and engineering as practiced in industries.

OBJECTIVE :To study the principles , practices and techniques of quality systems and engineering.

UNIT I INTRODUCTION 10
 Principles of Quality Management - Pioneers of TQM - Quality costs - Customer Orientation - Benchmarking - Re-engineering - Concurrent Engineering.

UNIT II PRACTICES OF TQM 10
 Quality system - ISO 9001:2000 - QS 9000, ISO 14000 - Quality Auditing - Leadership - Organisational Structure - Team Building - Information Systems and Documentation.

UNIT III TECHNIQUES OF TQM 10
 Single Vendor Concept - J.I.T. - Quality Function deployment - Quality Circles - KAIZEN - SGA - POKA YOKE - Taguchi Methods.

UNIT IV QUALITY BY DESIGN 8
 Introduction – Rationale for implementation – Benefits– Teams – Communication models – Implementation – Tools – Misconceptions and Pitfalls.

UNIT V PRODUCTS LIABILITY 7
 Introduction – Product safety law – products liability law – defenses – Proof and the expert witness – Financial Loss – The future of products liability – Prevention.

DISCRETE SYSTEM SIMULATION

L T P C
3 0 0 3

AIM: To teach the various aspects of simulation and its applications.

OBJECTIVE:

- To understand the importance and advantages of applying simulation techniques for solving various problems on discrete event systems.
- To teach various random number generation techniques, its use in simulation, tests and validity of random numbers etc. development of simulation models, verification, validation and analysis.
- Introduction to various simulation languages and comparison.

UNIT I INTRODUCTION

3

Systems, modeling, general systems theory, concept of simulation, simulation as a decision making tool, types of simulation.

UNIT II RANDOM NUMBERS

5

Pseudo random numbers, methods of generating random variates, discrete and continuous distributions, testing of random numbers.

UNIT III DESIGN OF SIMULATION EXPERIMENTS

8

Problem formulation, data collection and reduction, time flow mechanism, key variables, logic flow chart, starting condition, run size, experimental design consideration, output analysis and interpretation validation.

UNIT IV SIMULATION LANGUAGES

14

Comparison and selection of simulation languages, study of any one simulation language.

UNIT V CASE STUDIES IN SIMULATION

15

Development of simulation models using the simulation language studied for systems like, queuing systems, production systems, inventory systems, maintenance and replacement systems, investment analysis and network.

TOTAL : 45 PERIODS

TEXT BOOK:

1. Jerry Banks and John, S.Carson, BarryL. Nelson, David M.Nicol, and P.Shahabudeen, "Discrete event system simulation", 4th edition Prentice Hall, India, 2000.

PRECISION ENGINEERING

**L T P C
3 0 0 3**

AIM: The aim is to understand the principles and applications of Precision Engineering.

OBJECTIVES : The student is motivated learn about the concept of part accuracy, Machining accuracy and to discuss on the types of errors, and their sources. The student will be able to understand the need for precision and application. In addition, the student will enhance his/her knowledge in Precision Engineering and its applications.

UNIT I PRECISION ENGINEERING

8

Introduction – Accuracy and Precision– Need for high precision – concept of accuracy – tolerance an fits: system – Hole and shaft system – expects accuracy of a Manufacturing process – types of fits – Selective assembly.

UNIT II MATERIALS FOR PRECISION ENGINEERING

8

Diamond – types-single crystal- PCD – Natural-synthetic CBN - Ceramics – coated metals and non-metals–High– performance polymer – alloys – refractory metals: cutting tools – performance – components of instruments – Jewels – self Lubrication – smart materials – properties – testing – applications.

UNIT III PRECISION MACHINING

10

Precision grinding: IC chip manufacturing- ELID process – aspherical surface generation Grinding wheel- Designer and selection of grinding wheel-High-speed grinding-High-speed milling-Micro machining – Diamond turning-MEMS – micro finishing process – surface roughness measures – concept and non-concept method – comparison of features with machining process.

UNIT IV ERRORS: CAUSES AND REMEDICS

10

Static stiffness - influence on machining accuracy. Introduction – over all stiffness in a machine/instrument – errors due to variation of cutting forces – clamping forces – errors due to compliance while machining. Inaccuracy due to thermal effects: Heat sources –war dissipation – Geometry of thermal deformation-influence of forced isstratics dimensional wear of elements – instruments; Machining tools their influence an accuracy- error due to clamping and setting location.

UNIT V PRECISION MACHINE ELEMENTS

9

Introduction- guide ways- Drive systems; rolling element bearings-Principles, construction, classification, application etc., -Lubricated sliding bearings- construction – Principles etc.,- Hydrostatics bearings-types – aerostatic bearings – linear drive motors – magnetic bearings- applications-limitations - advantages.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. R.L. Murthy, Precision Engineering in Manufacturing, New age Instruction Publishes 2005. New Delhi.
2. V.C. Venkatesh and Sudin, Izwan, Precision engineering:- Tata McGraw Hill Co., New Delhi, 2007.

REFERENCE:

1. JAMESD, MEADOWS, - "Geometric Dimensioning and tolerancing", Marcel Dekker Inc.1995.

CI 9258**DESIGN FOR MANUFACTURING****L T P C
3 0 0 3**

AIM: The aim is to impart the students with knowledge of the general design principles of manufacturing and to provide complete informations for further study.

OBJECTIVE: At the end of this course the student should be able to understand the design principles of casting, welding, forming, machining and assembly, by considering various manufacturing constraints.

UNIT I INTRODUCTION 6

Economics of Process selection – General design principles of manufacturability – Proper material selection – Strength and Mechanical factors- Application of form design.

UNIT II CASTING DESIGN AND WELDMENT DESIGN 10

Factors affecting casting design- Strength aspects – Sand casting and die casting design-Factors affecting weldment design-Gas and arc welding design.

UNIT III FORMED METAL COMPONENTS AND NON METALLIC PARTS DESIGN 10

Design considerations for the manufacture of extruded, cold headed metal parts – Tube and section bends – Powder metal parts-Thermo setting plastic parts-Reinforced – Plastic/Composite parts.

UNIT IV MACHINED COMPONENTS DESIGN 10

Design considerations for the manufacture of Turned parts-drilled parts-milled parts, planned, shaped and slotted parts-Ground parts-parts produced by EDM.

UNIT V DESIGN FOR ASSEMBLY 9

Types of assembly – DFA –Index – evaluation of assembly – assembly cost reduction – case of assembly – impact on quality – related software usage – case studies.

TOTAL : 45 PERIODS**TEXTBOOK:**

1. James G. Bralla – "Handbook of product design for manufacture", McGraw Hill Book Co., 1986.

REFERENCES:

1. Henry Peck – "Designing for manufacture", Sir Isaac Pitman & Sons Ltd., 1973.
2. Matousek – "Engineering Design", Blackie & sons, 1956.

AIM: To provide knowledge on different types of Rapid Prototyping systems and its applications in various fields.

OBJECTIVE:

Generating a good understanding of RP history, its development and applications. Expose the students to different types of Rapid prototyping processes, materials used in RP systems and reverse engineering.

UNIT I INTRODUCTION 8

Need - Development of RP systems – RP process chain - Impact of Rapid Prototyping on Product Development –Digital prototyping - Virtual prototyping- Rapid Tooling - Benefits- Applications.

UNIT II REVERSE ENGINEERING AND CAD MODELING 10

Basic concept- Digitization techniques – Model Reconstruction – Data Processing for Rapid Prototyping: CAD model preparation, Data Requirements – geometric modeling techniques: Wire frame, surface and solid modeling – data formats - Data interfacing, Part orientation and support generation, Support structure design, Model Slicing and contour data organization, direct and adaptive slicing, Tool path generation.

UNIT III LIQUID BASED AND SOLID BASED RAPID PROTOTYPING SYSTEMS 10

Stereolithography (SLA): Apparatus: Principle, pre-build process, part-building, post-build processes, photo polymerization of SL resins, part quality and process planning, recoating issues, materials, advantages, limitations and applications.

Solid Ground Curing (SGC): working principle, process, strengths, weaknesses and applications. Fused deposition Modeling (FDM): Principle, details of processes, process variables, types, products, materials and applications. laminated object manufacturing (LOM): Working Principles, details of processes, products, materials, advantages, limitations and applications - Case studies.

UNIT IV POWDER BASED RAPID PROTOTYPING SYSTEMS 10

Selective Laser Sintering (SLS): Principle, process, Indirect and direct SLS- powder structures, modeling of SLS, materials, post processing, post curing, surface deviation and accuracy, Applications. Laser Engineered Net Shaping (LENS): Processes, materials, products, advantages, limitations and applications– Case Studies.

UNIT V OTHER RAPID PROTOTYPING TECHNOLOGIES 7

Three dimensional Printing (3DP): Principle, basic process, Physics of 3DP, types of printing, process capabilities, material system. Solid based, Liquid based and powder based 3DP systems, strength and weakness, Applications and case studies. Shape Deposition Manufacturing (SDM): Introduction, basic process, shape decomposition, mold SDM and applications. Selective Laser Melting, Electron Beam Melting – Rapid manufacturing.

TOTAL : 45 PERIODS

TEXT BOOK:

1. Rapid prototyping: Principles and applications, second edition, Chua C.K., Leong K.F., and Lim C.S., World Scientific Publishers, 2003.
2. Rapid prototyping, Andreas Gebhardt, Hanser Gardener Publications, 2003.

3. Rapid Tooling: Technologies and Industrial Applications, Peter D.Hilton, Hilton/Jacobs, Paul F.Jacobs, CRC press, 2000.

CI 9260 ELECTRONICS MANUFACTURING TECHNOLOGY L T P C
3 0 0 3

AIM: This course aims at providing knowledge in the field of electronic manufacturing and packaging.

OBJECTIVES: Upon completion of this course students will able to

1. Understand various steps in wafer preparation
2. Describe the method of manufacture and types of Printed circuit board(PCB)
3. Describe various components in THT and SMT
4. Explain Soldering and cleaning in Electronic packaging
5. Describe Surface Mount Technology (SMT)
6. Explain inspection, testing and rework of populated PCB.

UNIT I INTRODUCTION TO ELECTRONICS MANUFACTURING 8

History, definition, wafer preparation by growing, machining, and polishing, diffusion, microlithography, etching and cleaning, Printed Circuit Boards, types- single sided, double sided, multi layer and flexible printed circuit board, design, materials, manufacturing, inspection. Electronic packaging – Through Hole Technology (THT) and Surface Mount Technology (SMT)

UNIT II COMPONENTS AND PACKAGING 9

Through-hole components – axial, radial, multi leaded, odd form. Surface mount components- active, passive. Interconnections - chip to lead interconnection, die bonding, wire bonding, TAB, Flip chip, chip on board, multi chip module, direct chip array module, leaded, leadless, area array and embedded packaging, miniaturization and trends.

UNIT III SOLDERING AND CLEANING 9

Soldering theory, effect of elemental constituents on wetting, microstructure and soldering, solder paste technology – fluxing reactions, flux chemistry, solder powder, solder paste composition and manufacturing, solder paste rheology, Wave soldering. Adhesive and solder paste application. solder system variables. soldering temperature profile. Reflow soldering - profile generation and control, soldering quality and defects. Post solder cleaning and selection. Measurement of cleanliness levels.

UNIT IV SURFACE MOUNT TECHNOLOGY 11

SMT Equipment and Material Handling Systems, Handling of Components and Assemblies - Moisture Sensitivity and ESD, Safety and Precautions Needed, IPC and Other Standards, Stencil Printing Process, solder paste storage and handling, stencils and squeegees, process parameters, quality control - Component Placement, Equipment Type, Chip shooter, IC placer, Flexibility, Accuracy of Placement, Throughput, reflow soldering, adhesive, underfill and encapsulation process, applications, storage and handling, process & parameters.

UNIT V INSPECTION, TEST AND REWORK FOR PCB 8

Inspection Techniques, Equipment and Principle – AOI, X-ray, stencil printing process- defects & corrective action, component placement process - defects & corrective action, Reflow Soldering Process- defects & corrective action, underfill and encapsulation Process- defects & corrective action, Testing of assemblies, In-circuit testing (ICT), functional testing, testing jigs and fixtures concept of yield, Rework and Repair, tools, rework criteria and process, Design for - Manufacturability, Assembly, Reworkability, Testing, Reliability and Environment.

MICRO MACHINING METHODS

L T P C

3 0 0 3

AIM: The Purpose of this subject is to understand the principles of various micro fabrication processes.

OBJECTIVES:

Upon completion of this subject, student will be able to:

1. Understand principle of Microsystems and feed back systems
2. Know the different methods of micro fabrication.
3. Understand the properties and microstructure of materials
4. Appreciate integration processes in detail.
5. Enhance his/her knowledge in semiconductor manufacturing processes.

UNIT I INTRODUCTION 8

Introduction to Micro System design, Material properties, micro fabrication Technologies. Structural behavior, sensing methods, micro scale transport – feed back systems.

UNIT II MICROMECHANICS 9

Microstructure of materials, its connection to molecular structure and its consequences on macroscopic properties – Phase transformations in crystalline solids including marten site, ferroelectric, and diffusional phase transformations, twinning and domain patterns, smart materials.

UNIT III MICRO-FABRICATION 10

Bulk processes – surface processes – sacrificial processes and Bonding processes – special machining: Laser beam micro machining-Electrical Discharge Machining – Ultrasonic Machining- Electro chemical Machining. Electron beam machining. Clean room-yield model – Wafer IC manufacturing – PSM – IC industry-New Materials-Bonding and layer transfer-devices.

UNIT IV MECHANICAL MICROMACHINING 10

Theory of micromachining-Chip formation-size effect in micromachining-microturning, micromilling, microdrilling- Micromachining tool design-Precision Grinding-Partial ductile mode grinding-Ultraprecision grinding- Binderless wheel – Free form optics.

UNIT V MICRO ELECTRO MECHANICAL SYSTEM FABRICATION 8

Introduction – advance in Micro electronics – characteristics and Principles of MEMS – Design and application of MEMS: Automobile, defence, healthcare, Aerospace, industrial properties etc., - Materials for MEMS – MEMS fabrication- Bulk Micro Machining-LIGA – Microsystems packaging- Future of MEMS.

TOTAL : 45 PERIODS

NANOTECHNOLOGY

**L T P C
3 0 0 3**

AIM: The aim is to appreciate the students with the background, applications and current status of nanotechnology and nanomaterials, and to make them understand the relevant basic scientific principles underpinning nanotechnology.

OBJECTIVES:

At the end of this course the students are expected to understand the general issues relating to nanotechnology and nanofabrication.

- Methods for production of Nanoparticles
- Characteristic techniques of nanomaterials

UNIT I INTRODUCTION TO NANOMATERIALS 9

Amorphous, crystalline, microcrystalline, quasi-crystalline and nano-crystalline materials. Historical development of nanomaterials – Issues in fabrication and characterization of nanomaterials

UNIT II SYNTHESIS OF NANOMATERIALS 9

Methods of production of Nanoparticles, Sol-gel synthesis, Inert gas condensation, High energy Ball milling, Plasma synthesis, Electro deposition and other techniques. Synthesis of Carbon Nanotubes – Solid carbon source based production techniques, Gaseous carbon source based production techniques - Growth mechanisms Nano wires.

UNIT III CHARACTERISATION OF NANOMATERIALS 9
Scanning Probe Microscopy (SPM) – Scanning tunneling microscope, Transmission electron microscope, Scanning transmission electron microscope, Atomic force microscope, Scanning force microscopy, Electrostatic force microscopy, Dynamic force microscopy, Magnetic force microscopy, Scanning thermal microscopy, Piezo force microscopy, scanning capacitance microscopy, Nano indentation.

UNIT IV APPLICATIONS OF NANOMATERIALS 9
Applications in Mechanical, Electronics engineering industries – Use of nanomaterials in automobiles, aerospace, defense and medical applications – Metallic, polymeric, organic and ceramic nanomaterials.

UNIT V NANO FABRICATION AND MACHINING 9
LIGA, Ion beam etching, Molecular manufacturing techniques – Nano machining techniques –, Top/Bottom up Nano fabrication techniques - Sub micron lithographic technique, conventional film growth technique, Chemical etching, Quantum materials.

TOTAL: 45 PERIODS

**CI 9263 TECHNIQUES OF MATERIAL CHARACTERIZATION L T P C
3 0 3**

AIM: This course aims at imparting knowledge on various techniques of material characterization.

OBJECTIVES: On completion of the course the students are expected to be knowledgeable in microstructure evaluation, crystal structure analysis, electron microscopy, static and dynamic mechanical testing methods.

UNIT I MICRO STRUCTURAL EVALUATION 9
Principles of Optical Microscopy – Specimen Preparation Techniques – Polishing and Etching – Polarization Techniques – Quantitative Metallography – Estimation of grain size – ASTM grain size numbers – Microstructure of Engineering Materials.

UNIT II CRYSTALSTRUCTURE ANALYSIS 9
Elements of Crystallography – X- ray Diffraction – Bragg’s law – Techniques of X-ray Crystallography – Debye – Scherer camera – Geiger Diffractometer – analysis of Diffraction patterns – Inter planer spacing – Identification of Crystal Structure, Elements of Electron Diffraction.

UNIT III ELECTRON MICROSCOPY 9
Interaction of Electron Beam with Materials – Transmission Electron Microscopy – Specimen Preparation – Imaging Techniques – BF & DF – SAD – Electron Probe Microanalysis – Scanning Electron Microscopy – Construction & working of SEM – various Imaging Techniques – Applications- Atomic Force Microscopy- Construction & working of AFM - Applications .

UNIT IV MECHANICAL TESTING – STATIC TESTS 9
Hardness – Brinell, Vickers, Rockwell and Micro Hardness Test – Tensile Test – Stress – Strain plot – Proof Stress – Ductility Measurement – Impact Test – Charpy & Izod.

UNIT V MECHANICAL TESTING – DYNAMIC TESTS 9
Fatigue – Low & High Cycle Fatigues – Rotating Beam & Plate Bending HCF tests – S-N curve – LCF tests – Crack Growth studies – Creep Tests – LM parameters – Applications of Dynamic Tests.

**CI 9264 PRODUCTIVITY MANAGEMENT AND RE-ENGINEERING L T P C
3 0 0 3**

AIM: The aim is to appreciate the students with the background, applications and current status of productivity management and re-engineering, and to make them understand the relevant basic principles of these fields.

OBJECTIVES:

At the end of this course the students are expected to understand the general issues relating to Productivity management and re-engineering.

UNIT I INTRODUCTION 5
Productivity concepts - Macro and Micro factors of productivity - Productivity benefit model, Productivity cycle.

UNIT II PRODUCTIVITY MODELS 12
Productivity measurement at International, National and Organisational level - Total productivity models - Productivity management in manufacturing and service sectors - Productivity evaluation models - Productivity improvement models and techniques.

UNIT III ORGANISATIONAL TRANSFORMATION 8
Principles of organisational transformation and re-engineering - fundamentals of process reengineering - preparing the workforce for transformation and reengineering – methodology – guidelines - DSMCQ and PMP model.

UNIT IV RE-ENGINEERING PROCESS IMPROVEMENT MODELS 10
PMI models - Edosomwan model - Moen and Nolan strategy for process improvement - LMICIP model - NPRDC model.

UNIT V RE-ENGINEERING TOOLS AND IMPLEMENTATION 10
Analytical and process tools and techniques - Information and communication technology - Enabling role of IT, RE-opportunities, process redesign - cases. Software methods in BPR - specification of BP, case study - Order processing - user interfaces - maintainability and reusability.

TOTAL : 45 PERIODS

**CI 9265 DESIGN OF CELLULAR MANUFACTURING SYSTEM L T P C
3 0 0 3**

AIM: To impart knowledge on group technology, optimization algorithms, implementation of GT/CMS, Performance measurements and economical aspects of CMS.

OBJECTIVE:

At the end of this course the student should be able to understand

- Concepts and applications of Cellular manufacturing systems
- Traditional and non-traditional approaches of Problem solving
- Performance measurement
- Human and economical aspects of CMS.

UNIT I INTRODUCTION 12
Introduction to Group Technology, Limitations of traditional manufacturing systems, characteristics and design of groups, benefits of GT and issues in GT.

UNIT II CMS PLANNING AND DESIGN 10
Problems in GT/CMS - Design of CMS - Models, traditional approaches and non-traditional approaches -Genetic Algorithms, Simulated Annealing, Neural networks.

UNIT III IMPLEMENTATION OF GT/CMS 10
Inter and Intra cell layout, cost and non-cost based models, establishing a team approach, Managerial structure and groups, batch sequencing and sizing, life cycle issues in GT/CMS.

UNIT IV PERFORMANCE MEASUREMENT AND CONTROL 8
Measuring CMS performance - Parametric analysis - PBC in GT/CMS, cell loading, GT and MRP - framework.

UNIT V ECONOMICS OF GT/CMS 5
Conventional Vs group use of computer models in GT/CMS, Human aspects of GT/CMS - cases.

TOTAL: 45 PERIODS

TEXT BOOKS:

CI 9266 PLASTICITY AND METAL FORMING L T P C
3 0 0 3

AIM: To impart knowledge on the advanced metal forming techniques.

OBJECTIVES: At the end of the course the student should be able to understand the theory of plasticity and the advances in metal forming.

UNIT I THEORY OF PLASTICITY 9
Theory of plastic deformation – Engineering stress and strain relationship – Stress tensor – Strain tensor – Yield criteria – Plastic stress strain relationship – Plastic work – Equilibrium conditions – Incremental plastic strain.

UNIT II CONSTITUTIVE RELATIONSHIPS AND INSTABILITY 7
Uniaxial tension test – Mechanical properties – Work hardening, Compression test, bulge test, plane strain compression stress, plastic instability in uniaxial tension stress, plastic instability in biaxial tension stress.

UNIT III ANALYSIS OF METAL FORMING PROBLEMS 12
Slab analysis – Slip line method, upper bound solutions, statistically admissible stress field, numerical methods, contact problems, effect of friction, thermo elastic Elasto plasticity, elasto visco plasticity – Thermo mechanical coupling – Analysis of forging, rolling, extrusion elasto visco plasticity – Thermo mechanical coupling – Analysis of forging, rolling, extrusion and wire drawing processes – Experimental techniques of the evaluation of metal forming.

UNIT IV SHEET METAL FORMING 8
Bending theory – Cold rolling theory – Hill's anisotropic theory, Hill's general yield theory – Sheet metal forming – Elements used – Mesh generation and formulation Equilibrium equations – Consistent full set algorithm – Numerical solutions procedures – examples of simulation of simple parts – Bench mark tests – Forming limit diagrams.

UNIT V KNOWLEDGE – BASED SYSTEMS 8
Decision Support Systems – Group DSS – ESS – Artificial Intelligence – Expert System – Other intelligent technique – Neural network, Genetic Algorithm, Fuzzy Logic.

**CI 9268 STATISTICAL PROCESS CONTROL AND NON DESTRUCTIVE TESTING L T P C
3 0 0 3**

AIM: The aim is to appreciate the students with the background, applications and current status of Statistical Process Control and Non Destructive Testing.

OBJECTIVES:

At the end of this course the students are expected to understand the general issues and applications of Statistical Process Control and Non Destructive Testing.

UNIT I STATISTICAL QUALITY CONTROL 9
Methods and Philosophy of Statistical Process Control - Control Charts for Variables and Attributes - Cumulative sum and Exponentially weighted moving average control charts - Others SPC Techniques – Process - Capability Analysis - Six sigma accuracy.

UNIT II ACCEPTANCE SAMPLING 9
Acceptance Sampling Problem - Single Sampling Plans for attributes - double, multiple and sequential sampling, The Dodge - Roming sampling plans - Military standards.

UNIT III LIQUID PENETRANT AND MAGNETIC PARTICLE TESTS 9
Characteristics of liquid penetrants - different washable systems - Developers - applications - Methods of production of magnetic fields - Principles of operation of magnetic particle test - Applications - Advantages and limitations.

UNIT IV RADIOGRAPHY 9
Sources of ray-x-ray production - properties of d and x rays - film characteristics - exposure charts - contrasts - operational characteristics of x ray equipment - applications.

UNIT V ULTRASONIC AND ACOUSTIC EMISSION TECHNIQUES 9

Production of ultrasonic waves - different types of waves - general characteristics of waves - pulse echo method - A, B, C scans - Principles of acoustic emission techniques - Advantages and limitations - Instrumentation – applications – scanning electron microscope (SEM) – Transmission electron microscopy (TEM).

LEAN MANUFACTURING

**L T P C
3 0 0 3**

AIM: The aim is to appreciate the students with the background, applications and current status of lean manufacturing and to make them understand the relevant basic principles in this field.

OBJECTIVES:

At the end of this course the students are expected to understand the general issues relating to lean manufacturing.

UNIT I INTRODUCTION 9

The mass production system – Origin of lean production system – Necessity – Lean revolution in Toyota – Systems and systems thinking – Basic image of lean production – Customer focus – Muda (waste).

UNIT II STABILITY OF LEAN SYSTEM 9

Standards in the lean system – 5S system – Total Productive Maintenance – standardized work –Elements of standardized work – Charts to define standardized work – Man power reduction – Overall efficiency - standardized work and Kaizen – Common layouts.

UNIT III JUST IN TIME 9

Principles of JIT – JIT system – Kanban – Kanban rules – Expanded role of conveyance – Production leveling – Pull systems – Value stream mapping.

UNIT IV JIDOKA (AUTOMATION WITH A HUMAN TOUCH) 9
Jidoka concept – Poka-Yoke (mistake proofing) systems – Inspection systems and zone control – Types and use of Poka-Yoke systems – Implementation of Jidoka.

UNIT V WORKER INVOLVEMENT AND SYSTEMATIC PLANNING 9
METHODOLOGY
Involvement – Activities to support involvement – Quality circle activity – Kaizen training - Suggestion Programmes – Hoshin Planning System (systematic planning methodology) – Phases of Hoshin Planning – Lean culture

TOTAL : 45 PERIODS

CC 9212 FINITE ELEMENT ANALYSIS IN MANUFACTURING ENGINEERING L T P C
3 0 0 3

AIM: The aim is to provide the students with knowledge of the finite element method that will be of use in different manufacturing areas and to provide a foundation for further study.

OBJECTIVE: The objective is to equip students with fundamentals of finite element principles so as to enable them to understand the behaviour of various finite elements and to be able to select appropriate elements to solve physical and engineering problems with emphasis on structural and thermal engineering applications.

UNIT I INTRODUCTION 6
Basics of FEM – Initial value and boundary value problems – weighted residual Galerkin and Raleigh Ritz methods – review of Variational calculus – Integration by parts – Basics of variational formulation.

UNIT II ONE DIMENSIONAL ANALYSIS 10
Steps in FEA – Discretization, function – derivation of element characteristics matrix, shape function, assembly and imposition of boundary conditions – solution and post processing – One dimensional analysis in solid mechanics and heat transfer.

UNIT IV MANUFACTURING CONSIDERATION 10
 The product and its structure, inventory and process flow – Shop floor control Data structure and procedure – various model – the order scheduling module, Input/output analysis module the stock status database – the complete IOM database.

UNIT V INFORMATION SYSTEM FOR MANUFACTURING 10
 Parts oriented production information system – concepts and structure – Computerized production scheduling, online production control systems; Computer based production management system, computerized manufacturing information system – case study.

TOTAL : 45 PERIODS

PROJECT MANAGEMENT

**L T P C
3 0 0 3**

AIM: To Understand concepts and process involved in project management.

OBJECTIVE: To impart the knowledge that are essential in developing product, design, process improvement and the execution of a project.

UNIT I TOOLS FOR CONCEPT DEVELOPMENT 9
 Products division, Quality function deployment, Concept engineering – Tools for Design Development design failure mode and design analysis. Reliability prediction – Tools for Design optimization. The Taguchi Loss Function. Optimization Reliability – Tools for Design Verification: Reliability Testing, Measurement system evaluation, Process Capability Evaluation.

UNIT II TOOLS FOR PROCESS IMPROVEMENT 9
 Process improvement methodologies. The Deming Cycle-FADE-Basic tools for process improvement: flow charts; run charts and control charts, check sheets, histograms. Pareto diagrams. Cause and Effect Diagrams – Scatter Diagrams – Other tools for processes improvement. Kalzen Blitz. Poka-yoke (mistake proofing), process simulation-Engaging the work force in process improvement.

UNIT III STATISTICAL PROCESS CONTROL 9

Quality control measurements - SPC methodology – Control charts for variables data- Special control charts for variables data-control charts for attributes – Summary of control charts construction chart, np-charts, c & u charts – Designing control charts: sampling, size, frequency-SPC, ISO 9000-2000, AND SIX SIGMA-Pre control.

UNIT IV BENCHMARKING AND ESTABLISHING ENGINEERING 9

A Benchmarking Approach – Support tools for the benchmarking process: indented assembly cost analysis, form diagram, trend analysis – Setting product specifications: Basic, Advanced method.

UNIT V PROJECT MANAGEMENT 9

Understanding and representing tasks: Tasks, charts – Baseline project planning – Accelerating projects-project execution – Postmortem execution.

TOTAL : 45 PERIODS

TEXT BOOK:

1. Product Design & Development, Karl T.Ulrich, Steven D.Eppinger, TATA McGraw-HILL – 3rd Edition, 2003.

MANUFACTURING MANAGEMENT

**L T P C
3 0 0 3**

AIM: To impart knowledge on Manufacturing strategies and compositeness, Designing of Products, facilities and jobs, Inventory systems, MRP and revising the systems.

OBJECTIVES:

- Importance of manufacturing management
- Designing of new products, facilities and jobs
- Importance of inventory systems
- Revising the system.

UNIT I FIELD OF MANUFACTURING MANAGEMENT 6

Introduction – Manufacturing Strategies and competitiveness-Meeting the competitive Project management-

UNIT II DESIGNING OF PRODUCTS 9

Process selection-Process flow Design – Operations Technology -Waiting line management-Computer simulation of waiting lines – Quality management.
